

Quick Time Videos for Foreign Customers

DVDs produced in the United States work only in DVD players coded for Regional Playback Control System region 1. This region includes the US, Canada, Bermuda, and US territories. DVDs are also formatted for use on two different and conflicting regional television systems (PAL and NTSC). As a result, our DVDs will often not play in DVD players (or on television sets) in a foreign country.

We have a solution to this problem for our foreign customers. We can have our video production company produce a special DVD in Apple QuickTime video format. QuickTime videos can be played on any computer equipped with a DVD drive. QuickTime software is free and can be downloaded at <http://www.apple.com/quicktime/download/>. There are versions for both Mac and PC.

Please remember, these DVDs cannot be played in a stand alone DVD player intended for home theater. They will only work in a computer. **There will be an additional charge of \$7.95 US per title (not per disc).**

If you are ordering online and would like DVDs supplied in QuickTime format, please specify in the "Additional comments" field available at checkout.
